Water treatment

Water treatment

With increased population, expanding manufacturing and growing regulatory requirements the demand for industrial wastewater treatment services is projected to grow by around 5.3% a year for the next five years.

Wastewater is commonly used by many industry sectors including chemical, pharmaceutical, oil and gas, food, pulp and paper, metal, mining and power generation. And with each industry using different processes, the technologies used for treating wastewater are numerous.

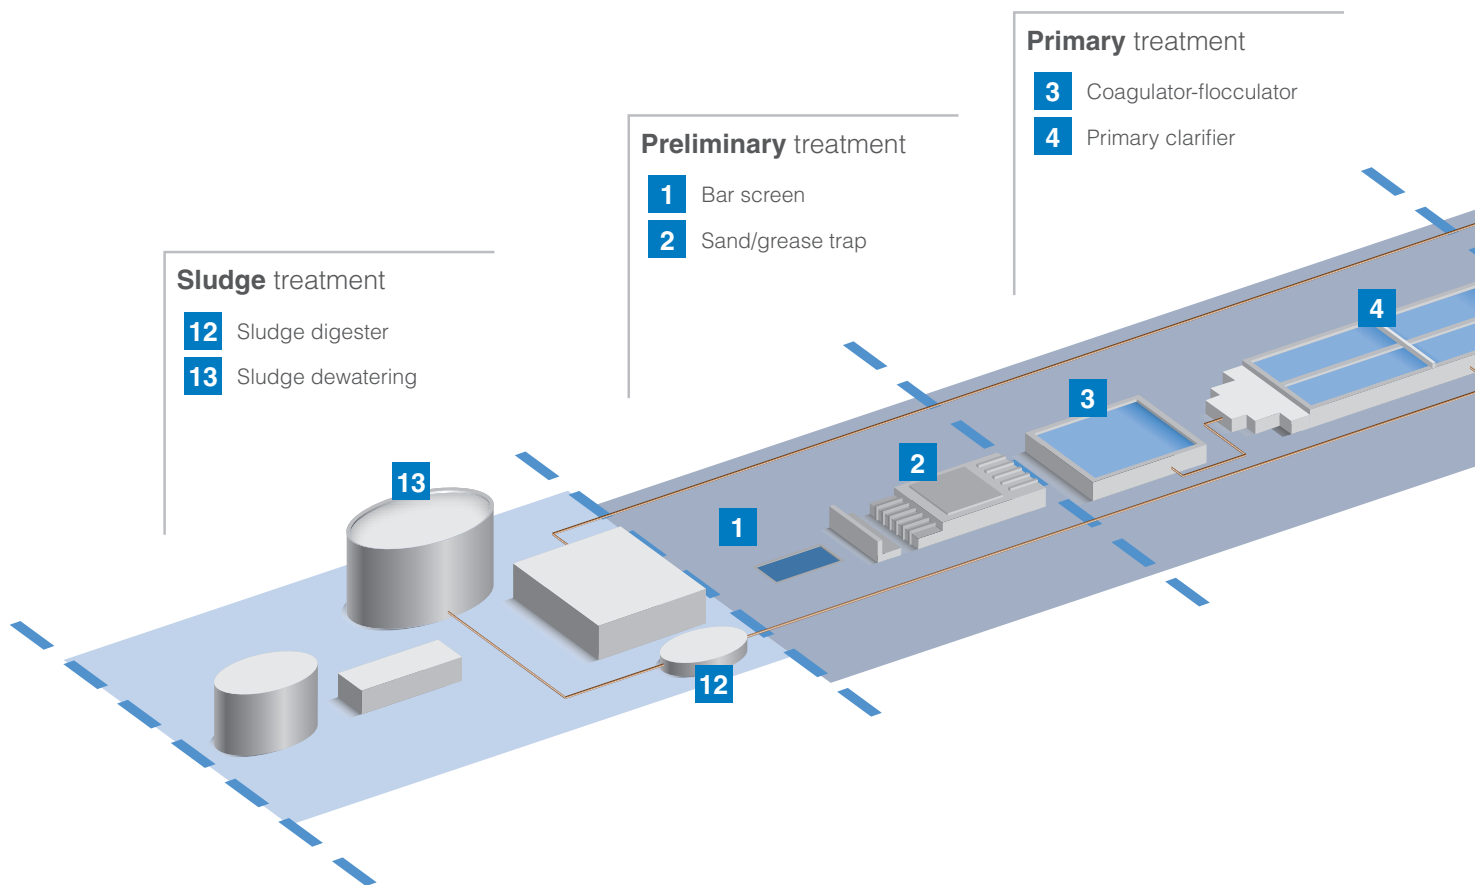

However, the operation and control part of the process is generally considered to be the main focus

as it includes operations such as separation, floatation, settling, filtration, neutralisation, absorption, ion exchange and chlorination.

At SMC we have local teams of specialists who understand these needs and can help you find the right solutions.

If you're using reverse osmosis devices or have micro/ultra/nano filtration applications or ozone systems check out some of our latest cutting edge products that have been designed and developed to help you.
